SUMMARY

M.Tech Computer Science student graduating May 2028 with Java/Python backend development, API and database workflows, and merged Java/C++ open-source fixes. Builds tested software and developer tools, diagnoses failures through logs and reproducible cases, and critically evaluates AI-generated code. Seeking Summer 2027 software engineering internships; available full-time from 31 May 2027.

OPEN-SOURCE CONTRIBUTIONS

OpenTelemetry Java - PR #8480 (merged): fixed malformed baggage parsing and added regression coverage.

fmt - PR #4813 (merged): fixed a 32-bit fallback uint128 build issue and added regression coverage.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript; working knowledge of C++, Go and Rust
Backend and web: Spring Boot, FastAPI, Node.js, REST APIs, PostgreSQL, Redis, Kafka, React; AWS S3 (project experience)
Engineering: Git, GitHub, Docker, Linux, pytest, JUnit, Testcontainers; data structures, algorithms, code review, reproducible debugging and regression testing

EXPERIENCE

Mercor | Software Engineer | Oct. 2026 - Present

- Contribute to a software engineering project while pursuing an M.Tech in Computer Science and Engineering.

Crossing Hurdles | AI Coding Annotator, Freelance | Sep. 2026 - Present

- Author Go/Rust coding tasks, reference solutions and Dockerized environments with deterministic correctness verifiers for software-engineering model evaluation.
- Root-caused a filesystem-boundary startup failure affecting eight remote evaluations; reproduced the mounted-folder case and added regression tests while retaining permission, link and file-identity safeguards. Reference checks passed 19/19, the untouched starter passed 0/19 and seven Stage 1 gates cleared.

micro1 | Software Engineer, Backend Contract | May 2026 - Present

- Build Java/Spring Boot APIs, PostgreSQL-backed workflows and React integration points; investigate defects through logs and database state, adding regression checks.

Outlier | AI Coding Evaluator, Freelance | May 2025 - Feb. 2026

- Evaluated AI-generated code for bugs, edge cases, algorithmic correctness and reasoning; wrote feedback explaining expected behavior, failures and fix rationale.

Alethe Labs | Software Engineering Intern | Jun. - Aug. 2025

- Built Python/FastAPI endpoints with request validation, error handling and automated tests for backend automation workflows.

TMEIC India | Software Engineering Intern | Mar. - Sep. 2024

- Developed internal applications and business-workflow automation using FastAPI and Power Automate.

SELECTED PROJECTS

Distributed Job Scheduler | Java 21, Spring Boot, PostgreSQL, Kafka, React
Implemented prioritized worker leasing, retries, dead-letter handling and lease recovery. Added a transactional outbox, operations dashboard and JUnit/Testcontainers tests for concurrent leasing and recovery.

CloudDrive | Java, Spring Boot, AWS S3, PostgreSQL, Redis
Built a file-management backend with S3 storage/retrieval, PostgreSQL metadata, Redis caching, JWT authentication, file versioning/sharing and automated tests.

ContractLens - API Regression Workbench | JavaScript, Node.js, REST APIs
Built a local contract-driven test runner with isolated stock-reservation fixtures and request/state evidence. Validated retry, stock and pricing invariants using boundary cases and provider stubs.

EDUCATION

SRM University-AP | M.Tech, Computer Science and Engineering | Aug. 2026 - May 2028 (expected)
VIT-AP University | B.Tech, Computer Science and Engineering | Jun. 2021 - Jun. 2025 | CGPA: 7.90/10
