SUMMARY

M.Tech Computer Science student graduating in June 2028, with a 2025 B.Tech and experience building internal applications, Java/Spring Boot and Python/FastAPI services, workflow automation, and third-party integrations. Translates product requirements into modular code, test documentation, and issue resolution; contributed independently reviewed fixes with regression coverage to OpenTelemetry Java and fmt.

EDUCATION

SRM University AP, Amaravati <i>Master of Technology (M.Tech), Computer Science and Engineering</i>	Aug. 2026 - Jun. 2028 <i>India</i>
Vellore Institute of Technology (VIT) <i>Bachelor of Technology (B.Tech), Computer Science and Engineering; First Class</i>	2021 - 2025 <i>India</i>

EXPERIENCE

AI Coding Annotator (Freelance) <i>Crossing Hurdles</i> - Design and validate deterministic Go and Rust coding benchmarks for databases, distributed systems, crash recovery, and software supply-chain security using Dockerized environments, reference solutions, isolated verifiers, and adversarial tests.	Sep. 2026 - Present <i>Remote</i>
Software Engineer (Backend, Contract) <i>micro1</i> - Build and integrate Java and Spring Boot REST APIs with React front ends and PostgreSQL-backed workflows in an established product codebase. - Translate product requirements into technical designs and modular changes; add tests and implementation notes, and troubleshoot defects through logs, database state, and regression checks.	May 2026 - Present <i>Remote</i>
Software Engineer Intern <i>Alethe Labs</i> - Built modular Python and FastAPI endpoints with request validation, error handling, and tests, translating written requirements into application behavior.	June 2025 - August 2025 <i>Remote</i>
Software Engineering Intern <i>TMEIC India</i> - Developed internal Python/FastAPI tools and automated recurring business workflows through Power Automate, SaaS integrations, and REST APIs.	March 2024 - September 2024 <i>Tumkur, India</i>

OPEN SOURCE CONTRIBUTIONS

- **OpenTelemetry Java - PR #8480**: Reproduced malformed baggage behavior, implemented a targeted parser fix, and added regression coverage; merged after 3 maintainer approvals and 28 passing checks.
- **fmt (C++) - PR #4813**: Traced a 32-bit build failure to a missing fallback operator, implemented the correction, and added regression coverage; merged with 46 passing checks.

PROJECTS

- **Distributed Job Scheduler** | *Java, Spring Boot, Kafka, Redis*: Built recurring jobs, worker leases, retries, and dead-letter handling with JUnit and Testcontainers; verified 10,000 of 10,000 jobs across 100 workers with zero failures.
- **CloudDrive** | *Java, Spring Boot, PostgreSQL, Redis, AWS S3*: Implemented authenticated REST APIs, object storage, metadata, caching, search, and automated tests; validated end-to-end authentication, versioning, search, sharing, and download flows against Dockerized services.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript, C++; working knowledge of Go, Rust, and C#
Application Engineering: Spring Boot, FastAPI, React, REST APIs, web services, PostgreSQL, third-party integrations, workflow automation, systems configuration, technical design
Testing and Delivery: JUnit, Testcontainers, unit, integration, and regression testing, test documentation, issue resolution, Git, GitHub Actions, Docker, CI/CD, troubleshooting
Systems and Algorithms: Data Structures and Algorithms, OOP, concurrency, operating systems, DBMS, computer networks, Redis, Kafka, AWS S3; Codeforces Expert (1622); 318 LeetCode problems solved
